McKesson Performance Analytics Explorer™
Drive proactive performance improvement with data-driven visual analysis

More than 50% of healthcare leaders report that they are "very weak to neutral" in their use of business intelligence (BI) to effectively manage their business[1]. Maybe you feel the same way. Given evolving regulatory reporting requirements and the overwhelming velocity of data being generated, it is easy to understand the problem.

You need a BI solution with analytical applications that are relevant to your business and the healthcare expertise to help you gain quick time to value. You also need access to a community of your peers who have faced and solved the same problems.

McKesson Performance Analytics Explorer™ is an interactive data discovery solution with multiple apps and self-service capabilities that help you predict, model and measure best practices and optimal outcomes. By creating transparency across your enterprise, you can better drive rapid cycle improvement.

Healthcare-specific applications

Many BI solutions start with a "blank page" and require analytics skill sets not always available. McKesson offers healthcare-specific analytics. Our solution includes healthcare analytics applications to help you measure variability in physician practice, mitigate pay for performance penalties, understand your market share and communicate with your executives.

Healthcare expertise

A common failure point in a BI implementation is the lack of governance[2]. McKesson brings years of healthcare experience in financial, clinical and operational leadership. Our advisors will help you build applications and coach you through a data governance process that ensures sustainable success.

Stakeholder usability

Ease of use is the hallmark of a sustainable BI strategy. McKesson Performance Analytics Explorer is an intuitive, interactive solution that

Benefits

McKesson Performance Analytics Explorer™ helps organizations:

- Realize the value of data as a key business asset

- Answer new questions with remarkable interactivity and visual clarity

- Facilitate self-service analytics across the organization

- Predict, model and measure best practices and optimal outcomes

- Create transparency needed to drive rapid cycle improvement

"Our Board loves the interactive framework of the operational and quality scorecards. Before McKesson Performance Analytics Explorer™, we could provide data spreadsheets and show hard numbers, but we had no ability to quickly analyze that data. Now, we can tell them the story behind the numbers — this is the result, and this is why."

Maureen Paur

Manager, Business Analysis Unit, St. Joseph's Hospital Health Center, Syracuse, N.Y.

BUSINESS CARE CONNECTIVITY

Features

McKesson Performance Analytics Explorer™ includes:

- Interactive, user-driven interface

- Fast, in-memory analysis of local and enterprise data sources

- Standard scorecards, dashboards and reports

- Visual data exploration capabilities

- Dynamic, linked visualizations revealing hidden trends and outliers

- Statistical and predictive analytics

- Flexible data preparation tools to import and transform data from multiple sources

- Guided analysis to capture workflow

- Variety of data analysis and data mining functions

figure 1

With dynamic, linked visualizations, McKesson Performance Analytics Explorer™ allows you to monitor cause and effect relationships that help drive mortality rates.

meets the needs of executives and analysts alike. A highly responsive drag-and-drop user interface facilitates quick self-training and enables compelling ad hoc analyses accessing multiple (local and enterprise) data sources. Executives can take key information with them wherever they go with our Analytic2Go™ mobile application.

Predictive modeling
McKesson Performance Analytics Explorer provides a platform for creating and deploying predictive analytics and statistics solutions. A self-configuring, in-memory data engine creates filters, hierarchies and aggregations directly from your data. This foundation means you

can rapidly prototype, develop and deploy new analytic applications using data mining and analysis.

Dynamic, guided analytics
Our solution features industry-leading BI scorecards and dashboards with interactive data exploration capabilities *(see figure 1)*. Dynamic, linked visualizations reveal hidden trends and outliers across multiple data sources.
